Download iHeart Radio from the Windows Store If you've tried any Windows 10 music app, let us know what you think in the comments below. There are a number of options available in the Windows Store, such as SiriusXM, Deezer, and more. If you have a recommendation to share, toss out the comments as well! We can earn a commission on purchases using links. find out more. There are several ways to take screenshots of Windows. Windows 10 itself has quite a few built-in screenshot tools, and there are some excellent free options if you want more features. Here are all the best screen capture utilities. Here's the truth: Most of these screenshot programs are quite capable. Which will come off better, which features you want and which interface you like best. Editor's Note: On today's list, we insist on tools that provide free consumer versions for basic use. If you are looking for something suitable for business use or screen recording tools and money is not an object, Snob is one of the most popular and effective tools in the industry. But if you just want a few simple screenshots on your home PC, you probably don't need it. The best tool you already have: Windows itself While this article is largely about third-party screenshot tools, you really should mention all the screenshot tools built into Windows as well. In Windows 10 and Windows 8, you can simply press Windows+ PrtScn on the keyboard to instantly save the full-screen screenshot on the PNG form to the Pictures folder. You can also press PrtScn on any version of Windows to save a copy of the screen (or Alt+PrtScn only for the active window) to the Clipboard. You can then paste it into any application. And on Windows 10, you can even press Windows+Shift+S to pin part of the screen and copy it to the Clipboard. RELATED: How to take screenshots in Windows 10 If you want something stronger, you can launch the Screenshot tool in Windows 7, 8, and 10. You can take screenshots of the entire screen, a window, or an area of the screen. You can set a delay of up to five seconds if you need time to adjust the screenshot after clicking the button. Other screenshot utilities are more full of features, but Windows has surprisingly capable tools that you can use on any computer without installing anything extra. It is also worth

mentioning that many of the online storage tools feature their own screenshot key combinations. For example, if onedrive has the feature turned on (OneDrive settings &gt; autosave &gt; screenshots), press PrtScn to capture the entire screen active window) and saves it as a PNG file in the Pictures folder on OneDrive. The same is true of Dropbox (Dropbox settings &gt; Import &gt; screenshots). Best basic screenshots: Greenshot Greenshot one of the most popular screenshot utilities for Windows. It is a simple tool that runs on the taskbar. You can press one of the user-configurable keyboard shortcuts, or right-click the taskbar icon and select an option to start the screenshot. This tool can take screenshots of the entire desktop, a window, a region, or the last region you took a screenshot of. The Settings window includes a number of options, including delaying the screenshot if you need time to set screenshots after you've inserted them. This is important if, for example, you want to display an open menu that you can press Alt or Ctrl to close. Once you've taken a screenshot, you can either copy it to the Clipboard, save it to a location of your choice, open it in a Microsoft Office application, open it in an image editor, or upload it directly to the Imgur image sharing site for easy sharing. The included external command-building module allows you to add programs to this list. Greenshot has no built-in note options, but it is a powerful utility that runs on the taskbar and works very well. Greenshot is completely free and is an open source application. Best for annotations and editing: PicPick PicPick's interface is the opposite of Greenshot's. Where Greenshot hides it in the taskbar and offers a minimal interface, PicPick provides a modern Windows interface that's done with a ribbon bar. If you take multiple screens, PicPick shows them all in your editor using tabs. While PicPick has a smooth interface that really sets it apart from Greenshot's editing interface. With PicPick, you can resize and cut screenshots, apply effects, insert text, and add stamps, such as numbers and arrows, to annotate screenshots before sharing them. You can then upload directly to services like Facebook, Twitter, or an FTP server directly from PicPick's Share tab. Whether this appeals to you depends on what you're looking for in a screenshot program. If you just want a screenshot to get out of the way and let you share screenshots or work with them in the photo editor you want, Greenshot is excellent. If you want a screenshot program to give you simple editing and annotation tools, PicPick is the best. PicPick is completely free for home use, but costs \$25 for business use. If you are looking for a screenshot tool similar to photo editing that is free for both personal and business use, you can also try Screenpresso. We prefer PicPick's simpler interface, however. Skitch was another screenshot utility with basic notes features that people liked, but Evernote discontinued Skitch for Windows. PicPick is a pretty good alternative to Skitch. Best for power users: ShareX ShareX is not who are looking for a simple screenshot. This application automatically uploads screenshots you buy from more than 80 destinations, dropbox ftp servers and Amazon S3. You can also screenshot tools you won't find in many other like the ability to scrolling capture all applications on your computer (something PickPick also features), allowing you to take a screenshot of a long document for each application, and the ability to use the Website Capture for each web address. You can set ShareX to automatically perform various capture and upload tasks every time you take a screenshot. For example, every time you take a screenshot, you can set ShareX to automatically save it to your hard drive, add a watermark, and upload it to a server of your choice. Once the upload is complete, ShareX automatically copies the URL of the uploaded image to the Clipboard and share it on Twitter. ShareX also has other powerful features, such as the ability to automatically capture screenshots after a while, which you can configure - and of course you can automatically upload them to a server if you like. This application is very powerful and people who just want to make simple screenshots will probably stick with something simpler. But, if these power-user features appeal to you, ShareX is the best option. ShareX is completely free and open-source. The best tools for gaming screenshots of the above tools are mainly for taking pictures screenshots of Windows desktop and typical desktop applications. They don't always work properly with full-screen games. If you want to take screenshots of video games, we recommend that you create special tools to capture pc game screenshots. For example, Steam has built-in shortcuts to capture screenshots in any game, and many games have their own screenshot keys. RELATED: How to take screenshots of PC games This feature is also built into graphics driver utilities like NVIDIA GeForce Experience and AMD ReLive. NVIDIA's GeForce Experience software even lets you record gameplay and move your in-game camera to take amazing screenshots in some modern games. And windows 10's built-in game bar can take screenshots in almost any game. Too.
